

Laravel + Next.js 8-Week Full-Stack Developer Roadmap

Week 1: PHP & Backend Fundamentals

- Understand backend request-response flow.
- Learn PHP basics: variables, arrays, loops, functions, superglobals.
- Understand HTTP, APIs, and JSON.
- Practice: Build a PHP form to save data in MySQL.

Week 2: Getting Started with Laravel

- Install Laravel using Composer.
- Understand file structure: routes, controllers, models, views.
- Learn routing and environment setup.
- Practice: Create 'Hello Laravel' project.

Week 3: Models, Migrations & Eloquent ORM

- Create migrations and models.
- Perform CRUD operations using Eloquent ORM.
- Understand relationships (One-to-Many).
- Practice: Build a Task Manager with CRUD.

Week 4: Building RESTful APIs

- Create routes in routes/api.php.
- Return JSON responses and validate requests.
- Handle errors and HTTP status codes.
- Practice: Build Blog API with CRUD endpoints.

Week 5: Authentication & Authorization

- Use Laravel Breeze or Sanctum for authentication.
- Learn token-based auth and middleware.
- Implement role-based access control.
- Practice: Secure blog API with user login/register.

Week 6: Connect Laravel API with Next.js

- Enable CORS and connect backend with Next.js.
- Fetch data from Laravel API using fetch() or axios.
- Implement authentication in Next.js.
- Practice: Build a Blog Frontend connected to Laravel.

Week 7: Advanced Laravel Features

- Learn file uploads, notifications, queues, and jobs.
- Understand API Resource classes and policies.
- Practice: Add profile pictures or comment system.

Week 8: Deployment & Portfolio Project

- Deploy Laravel backend (Render/Hostinger).
- Deploy Next.js frontend (Vercel).
- Configure .env and database in production.
- Final Project: Full-Stack Blog System with Laravel + Next.js.
